IF IN DOUBT “TAG IT”

TYPICAL DIMENSIONS
60KG Black Marlin in good condition
X to X 190cm (6.2ft) (74in)

60kg Striped Marlin in good condition
X to X 210cm (6.10ft) (82in)

80KG Black Marlin in good condition
X to X 212cm (7.0ft) (84in)

80kg Striped Marlin in good condition
X to X 230cm (7.6ft) (90in)

What marlin is that?

BLUE MARLIN In smaller specimens, blue marlin are often mistaken for their striped cousins. However, sharp eyes will notice the lower dorsal fin, straighter pectoral fin and slightly shorter bottom jaw.

BLACK MARLIN Distinguishing features of the black marlin are a lower dorsal fin (relative to body depth) than the other species, and distinctive rigid and other sickle-shaped pectoral fins.

STRIPED MARLIN Out of the three, the striped marlin has the highest dorsal fin, which helps to distinguish it from the very similar blue. Stripes also have a longer lower jaw and leaf-shaped pectoral fins.
